MAT 126: Trigonometry
Review for Final Exam

1. $\tan \mathrm{A}=2 / 9 \quad \mathrm{~A}$ is in quadrant III
$\sec B={ }^{-7} / 4 \quad B$ is in quadrant II
Give exact values (simplified fractional/radical form) for the following:
(a) $\sin \mathrm{A}=$ $\qquad$
(b) $\sin \mathrm{B}=$ $\qquad$
(c) $\cos \mathrm{A}=$ $\qquad$
(d) $\cos \mathrm{B}=$ $\qquad$
(e) $\cot \mathrm{A}=$ $\qquad$ (f) $\tan \mathrm{B}=$ $\qquad$
(g) $\sec \mathrm{A}=$ $\qquad$ (h) $\csc \mathrm{B}=$ $\qquad$
(i) $\cos (\mathrm{A}+\mathrm{B})=$
(j) $\sin 2 \mathrm{~A}=$
(k) $\tan \mathrm{A} / 2$
2. Convert the following:
(a) $18^{\circ}=$ $\qquad$ radians
(b) $7 \pi=\quad$ degrees
(c) $58.27^{\circ}=$ $\qquad$ degrees, minutes, seconds
(d) $33 \mathrm{rpm}=$ $\qquad$ radians $/ \mathrm{sec}=$ $\qquad$ meters $/ \mathrm{sec}$ if radius $=4 \mathrm{~m}$.
3. Solve for x in degrees in the interval $[0,360)$ :
(a) $\tan (3 x-4)=\cot (4 x-3)$
(b) $2 \cos ^{2} \mathrm{x}+\cos \mathrm{x}-1=0$
(c) $-2 \cos 2 x=\sqrt{ } 3$
4. Solve the following triangles:
(a)

(b)

7 ft .
5. Solve the following:
(a) A forest ranger is at a spot which has an angle of elevation of $22.5^{\circ}$ to the top of a 200 foot tall tower. How far is the ranger from the base of the tower?
(b) City B is 6 miles due east of City C. City A is 5 miles from C.

The bearing from C to A is $\mathrm{S} 45^{\circ} \mathrm{W}$. Find the distance between cities A and B .
(c) To approximate the speed of the current of a river, a circular paddle wheel with radius 4 feet is lowered into the water. If the current causes the wheel to rotate at a speed of 10 revolutions per minute, what is the speed of the current in miles per hour? $(5280$ feet $=1$ mile $)$
6. Find the area of the following:
(a) A field in the shape of a sector of a circle with central angle $40^{\circ}$ and radius of 200 meters.
(b) A triangular field with side measures of 50 meters, 75 meters, and 100 meters.
7. Graph each function over a two-period interval. Label the $x$ and $y$ axis with the appropriate values. Give the period and the amplitude.
(a) $y=3 \sin (6 x)$
(b) $y=2 \cos (0.5 x)$
8. The function $y=-2+5 \sin 3(x-\pi)$ has amplitude $\qquad$ , period $\qquad$ , phase shift $\qquad$ units to the $\qquad$ and has a vertical translation $\qquad$ units
$\qquad$ -
9. Give the exact value for the following:
(a) $\sin ^{-1}(-1)=$ $\qquad$ (b) $\arccos (\sin (7 \pi / 6))=$ $\qquad$
10. Solve for x . Use your calculator and round the value to 4 decimal places.
(a) $\cos ^{-1} \mathrm{x}=\left(\tan ^{-1}(4 / 3)\right)$
(b) $8 \sin ^{-1}(x+1)=\pi$
