To view this newsletter online go to: wileyonlinelibrary.com

The descriptive analysis explores how institutions operationally define “good” assessment via meta-assessment rubrics (MARs). The current (adopted Spring 2012) and former scoring rubrics for programmatic assessment appear at the end of this PDF.

Banta, Trudy W. “A Surprising Reaction.”

The editor responds to questions about the Lumina Degree Qualifications Profile (DQP). The DQP is a concept, not an assessment tool, available free of charge to institutions who should expand the DP by adding institution-specific outcomes to avoid homogenization. The emphasis in the DQP is on the cumulative integration of knowledge.

Daffron, Eric and Sandra J. Jordan. “Getting SMART with Assessment: ACTION Steps to Institutional Effectiveness.”

To help communicate the process of assessment of student learning, the authors document their SMART process:

- Sharpen learning goals into outcomes and set achievement targets;
- Map outcomes across the curriculum;
- Assess the outcomes;
- Review the results;
- Transfer the information into action.

Other institutional assessment can be made memorable through ACTION:

- Align goals with strategic directions;
- Create objectives and action steps;
- Tie action steps to targets;
- Identify measures;
- Observe actual results of assessment activities;
- Notify the planning committee of results.
• Houlette, Forrest. “Borrowing Techniques from Computational Linguistics to Process Qualitative Data.”

The author borrows a computational linguistic technique to teach human coders the process to analyze qualitative data (student survey responses to the “runaround” they experience. 1) Named Entity Recognition (named entities cannot be subdivided without changing them fundamentally; i.e., names and instruments); 2) Event Segmentation (events are blocks of text that describe a coherent sequence of activities; i.e., unfulfilled promises or employees solving problems); 3) Themes (topics that are repeated often enough to achieve significance). Applying deep case hypotheses to build links among items, the assessment led to action plants to address the emergent issues.

• Crawford, C.B. and Larry Gould. “Department Chair Perspective on Learning Outcomes Assessment at Kansas’s Public Universities.”

Administrators studied the perception of assessment among department chairs. Their findings revolved around assessment plan implementation, faculty motivation towards assessment, student learning outcome establishment, the need for and culture of assessment, assessment resources, sharing of results with students, and variation in methods used for assessment.

• Pike, Gary R. “Assessment Measures: Criteria for Evaluating Campus Surveys.”

The author defines the uses to be made of student college experience surveys (from CIRP and NSSE) and cautions that along with examining packaged benchmark data, that institutions should examine all individual survey items.
This rubric was adopted by the Faculty Senate Academic Assessment Committee during the 2011-12 school year and was implemented beginning in Fall 2012. Program coordinators were sent this revised rubric along with their 2011-12 assessment data in Fall 2012.

<td>All goals are clearly defined using best practice language. All goals identify what students of the program will know, value, and be able to do upon graduation with no gaps remaining in student learning. The most recent set of goals appear accurately and completely on the program’s designated web space and most recent Bulletin (2012) and correspond to the most recent set of goals found in their program assessment plan grid. All program goals are mapped to required and elective courses both within and without the major; all data is current.</td>
<td>All outcomes are clearly defined using best practice language. All outcomes indicate what students should be able to demonstrate, represent, or produce upon graduation. All outcomes are mapped to their relevant goal. All outcomes are measureable as written. No gaps in the scope of student learning remain. All outcomes are mapped to required and elective courses both within and without the major; all data is current.</td>
<td>All measures are clearly defined and relevant to their outcome. Measures are clearly linked via assessment plan grid to a proper tool. All current rubrics or tools are on file at OIRA to give clarity to the assessment plan and for transparency. There is at least 1 direct measure per outcome and the majority of measures per outcome are direct. The majority of measures have intrinsic motivation for students (i.e., tied to grades). All outcomes have multiple measures at different times in the student career.</td>
<td>Success criteria are provided, clearly stated, relevant and accurate for all measures. Success criteria is clearly linked via assessment plan grid to a proper tool. Data is submitted within the proper time frame. All data the program uses for assessment is submitted with any exceptions due only to lack of course offering or student population, which are noted in the report.</td>
<td>N/A</td>
<td>100% of previous-year OIRA feedback is responded to. All best practice suggestions are implemented OR the program has successfully reasoned why the changes should not occur or have not occurred.</td>
<td>Improvements implemented the previous year in assessment and/or curriculum are discussed and their impact is noted. Programmatic data results are summarized and discussed. Results are used and interpreted by faculty, focusing on topics and questions that best fit their program needs. Improvement initiatives are identified and result-driven changes are noted. Most or all faculty are consulted with adjuncts either consulted or informed of program-wide changes and initiatives. Suggests a &quot;culture of evidence&quot;.</td>

A &quot;culture of evidence&quot; has developed within the program.</td>
</tr>
</tbody>
</table>

Notes:
- Each column is dependent on all preceding columns. Therefore a program cannot score a specific value (e.g., 3) for one column (component) unless it has scored that value or higher for all preceding columns.
- Valid and well defined measures must identify what is being measured, where (e.g., the course) it is measured, how (test, portfolio, paper, etc.) it is measured, and the measurement tool (e.g., scannable form).
- Unless the frequency of measurement is explicitly stated, annual is assumed.
